

PROJECT OVERVIEW · PLAIN-LANGUAGE EDITION

Quick Job

A simple explanation of what we're building, how it works, and how it makes money — written for anyone, technical or not.

Beta launch target: **September 2026**

Prepared for stakeholders, partners, and anyone new to the project

THE BIG IDEA

What is Quick Job?

In one sentence: an online marketplace where people who need a job done can find and pay someone to do it — safely.

Think of it like a local, Malawi-focused version of platforms such as Fiverr or Upwork. On one side are **service providers** — designers, developers, tutors, tradespeople, and other skilled people who want to sell their services. On the other side are **buyers** — anyone who needs a job done and wants to hire someone quickly, safely, and at a fair price.

Quick Job brings both sides together in one place: providers list what they offer, buyers browse and hire, everyone pays and gets paid through a trusted local payment system, and the whole process is protected by reviews, dispute handling, and a support team.

1

For Providers

A shop window to showcase your skills, build a reputation, and get paid reliably for work you already do.

2

For Buyers

A fast, trustworthy way to find someone qualified, agree on a price, and know your payment is protected.

3

For Everyone

A platform built around fairness — clear pricing, honest reviews, and a real process when something goes wrong.

Why Malawi needs this: most freelance marketplaces are built around payment methods common overseas — cards and bank transfers that many people locally don't use day-to-day. Quick Job is built from day one around mobile money and bank transfer, the way people in Malawi actually pay for things.

THE EXPERIENCE

How it works, step by step

From "I need this done" to "job complete" — five simple stages.

- **1. Discover.** A buyer searches or browses for the kind of service they need — logo design, tutoring, plumbing, whatever it is — and compares providers by price, ratings, and past work.
- **2. Order & pay.** The buyer picks a package and pays upfront through our payment partner, using mobile money, bank transfer, or card. The payment is confirmed before any work begins.
- **3. Work gets done.** The provider does the work, communicating with the buyer through the platform's built-in messaging — so there's always a record of what was agreed.
- **4. Delivery & confirmation.** The provider delivers the finished work. The buyer reviews it and confirms it's complete (or it auto-confirms after a few days if they don't respond).
- **5. Review.** Both sides rate each other, building a track record that helps everyone make better decisions next time.

If something goes wrong: a buyer who isn't satisfied can raise a dispute before confirming the order. A neutral member of our support team reviews the evidence — the work delivered, the messages exchanged — and decides fairly whether the order should be completed or refunded.

HOW IT MAKES MONEY

No commission. Ever.

This is one of the most important — and unusual — decisions behind Quick Job.

Many marketplaces take a cut (a "commission") out of every single order — often 10-20%. Quick Job doesn't. When a buyer pays MWK 10,000 for a job, the provider receives the **full** MWK 10,000. Quick Job never touches or holds that money at all — it flows directly from the buyer to the provider through our licensed payment partner.

0%

COMMISSION ON ORDERS

100%

OF PAYMENT GOES TO PROVIDER

So how does the business earn revenue? Through **subscriptions** — optional paid plans that providers can choose if they want extra benefits, such as more portfolio space, deeper insight into their performance, or better visibility in search results. Buyers never pay a subscription, and free-tier providers can still fully use the platform.

For the first six months after launch, every provider gets full access for free while the platform builds a track record — subscription billing is fully built and ready, simply switched off until then.

TRUST & SAFETY

Keeping it fair for everyone

A marketplace only works if people trust it. Four things carry that weight.

System	What it does, in plain terms
Reviews & ratings	Both sides rate each other honestly after a job is done. Reviews are checked for spam or abuse before they go public, and can't be edited afterward — so they stay trustworthy.
Dispute resolution	If a buyer and provider disagree about whether a job was done properly, a trained staff member steps in, reviews the evidence, and makes a fair call — aiming to resolve every case within two business days.
Content moderation	Reports of bad behavior, fake listings, or abuse are reviewed by staff, with a clear path from a warning, to a temporary suspension, to a permanent ban for serious or repeated problems.
A permanent paper trail	Every important action taken by staff — a suspension, a refund, a decision — is permanently logged. Nobody can quietly make a decision that isn't accounted for.

Protecting personal information: Quick Job is built to follow Malawi's data protection law from day one — not as an afterthought. That means people's personal details are kept secure, used only for what they agreed to, and users have a real, working way to request their data or ask for their account to be deleted.

WHO AND WHEN

Timeline & the people building it

Beta launch: September 2026

Every core piece of the product — provider profiles, listings and search, ordering and messaging, and the admin/support tools — launches together. Nothing important is left out of the first release.

The product is being built by a small, focused team of **six engineers** — four earlier-career developers supported closely by two senior engineers who review every piece of work before it ships. The team follows a disciplined, well-documented way of working, with every change tested and reviewed before it goes live, specifically so that a small team can move quickly without sacrificing quality or safety.

Deliberately, some things are *not* being built for this first launch — because trying to do everything at once is how small teams miss deadlines. Fancier search technology, support for currencies beyond the Malawian Kwacha, and AI-powered "similar services" recommendations are all good ideas for later, once the core platform has proven itself with real users.

IN SUMMARY

Quick Job, in one page

- **What it is:** a two-sided marketplace connecting Malawian service providers with buyers who need work done.
- **How people use it:** browse or list a service, pay or get paid safely through mobile money or bank transfer, message and deliver the work, then review each other.
- **How it earns money:** optional provider subscriptions only — never a cut of what buyers pay providers.
- **Why people can trust it:** honest reviews, a real dispute process, active moderation, and a permanent record of every important decision.
- **When it launches:** a full-featured beta in September 2026, built by a small, disciplined engineering team.

Quick Job

A fair, local marketplace for getting things done — built around how Malawi actually works and pays.
